

Awing AI Learning

User Guide

Teaching the Awing language to kids and beginners through interactive lessons, native speaker voices, games, and quizzes.

This guide walks you through installing the app, creating profiles, navigating the three difficulty levels, using every feature, and unlocking advanced content.

Free on the App Store and Google Play

1. About this Guide

Welcome! This guide is for anyone using Awing AI Learning to learn or teach the Awing language. It assumes no prior experience with the app. You will learn how to install it, create profiles for each member of your family, navigate the modes, complete lessons, take quizzes, play games, and unlock advanced content.

This guide does not cover the Developer Mode features — those are reserved for the app's developer and content reviewer.

2. What is Awing AI Learning?

Awing AI Learning is a free educational app that teaches the Awing language. Awing is a Grassfields Bantu language spoken by about 19,000 people in the Mezam division of Cameroon's North West region.

The app is designed for kids and beginners, but adults can use it too. It includes:

- More than 8,000 Awing words organized into categories
- Six character voices (boy, girl, young man, young woman, adult man, adult woman)
- Native speaker recordings for words contributed by Dr. Sama, his family, and approved community contributors
- Three difficulty levels: Beginner, Medium, and Expert
- Stories with audio narration and comprehension quizzes
- Games like Picture Match, Sentence Building, and Tone Hunt
- Daily word suggestions personalized to each profile
- Multi-profile support so each family member has their own progress and daily picks
- Cloud backup so your progress follows you to a new phone

3. System Requirements

- **iPhone:** iOS 14 or newer
- **Android:** Android 8 (Oreo) or newer
- **Storage:** about 1.1 GB free space (downloads at install time)
- **Internet:** needed for installing, Google Sign-In, cloud backup, and contributing recordings. Most learning works offline once the app is installed.
- **Google account:** required for sign-in and progress backup. Any Gmail or Google Workspace account works.

4. Installing the App

Install with whichever method is easier — searching by name or tapping a direct link.

4.1 On iPhone (App Store)

- 1 Open the App Store (the blue letter A icon on your home screen)
- 2 Tap the Search tab at the bottom
- 3 Type: **Awing AI Learning**
- 4 Tap **Get**, then approve with Face ID, Touch ID, or password
- 5 Wait for the install to complete (the 1.1 GB download will use Wi-Fi if you are not on cellular)

Direct link: <https://apps.apple.com/app/id6764426877>

4.2 On Android (Google Play)

- 1 Open the Google Play Store
- 2 Tap the search bar at the top
- 3 Type: **Awing AI Learning**
- 4 Tap **Install**
- 5 Wait for the install to complete

Direct link: <https://play.google.com/store/apps/details?id=com.awing.learning>

Note: the first time you launch the app it spends about 30 seconds unpacking content. This only happens once.

5. First Launch & Google Sign-In

- 1 Tap the Awing AI Learning icon on your home screen
- 2 The sign-in screen appears
- 3 Tap **Sign in with Google**
- 4 Pick the Google account you want to use (or tap **Add account**)
- 5 Approve the sign-in prompt

Why Google sign-in?

- Your progress saves to your own Google account's cloud
- When you change phones, signing in with the same account restores everything
- You can have multiple profiles (children, spouse) on one account
- The app never asks you to invent or remember a password
- No information is shared with anyone except the cloud backup (only you can read it)

6. Creating Profiles

After signing in for the first time, the app asks you to create a profile. Each person who will use the app should have their own profile so their progress, XP, and daily words stay separate.

6.1 Create your first profile

- 1 Tap **Create New Profile**
- 2 Enter the person's name (e.g., "Joel" or "Mom")
- 3 Optionally pick an emoji avatar
- 4 Choose the starting difficulty level (we recommend Beginner for everyone, even if you already know some Awing)
- 5 Tap **Save**

6.2 Add more profiles

From the profile selection screen, tap the **+** button to add another profile. You can have as many as you want — one per child, one for yourself, one for grandparents who visit.

6.3 Optional: set a PIN

If you want a profile to be private (so siblings can't open each other's progress), set a 6-digit PIN: tap the profile, go to Profile Settings, and tap **Set PIN**.

Important: if you forget a profile's PIN, contact the developer through the in-app feedback form — the PIN is stored only on your device.

7. The Home Screen

After picking a profile, you land on the Home Screen. It has four mode cards arranged in a column:

Card	Color	Purpose
Beginner	Green	Start here. Always available.
Medium	Orange	Intermediate lessons. Locked until Beginner is finished.
Expert	Red	Advanced lessons. Locked until Medium is finished.
Stories	Teal	Narrated Awing stories with comprehension. Always available.

Top-right icons:

- **Cloud icon** - shows backup status. Green check means your progress is saved to the cloud.
- **Profile icon** - opens your XP, badges, and progress summary.
- **Feedback icon** - send the developer a message, bug report, or suggestion.
- **Switch profile icon** - pick a different profile without signing out.

Bottom features:

- **Contribute** button - submit your own pronunciations, spelling corrections, or new words. Protected by a parental gate so kids don't submit accidentally.

- **Today's Words** link - the daily 10 words chosen for the active profile.
- Version number - shows which version of the app you have.

8. Beginner Mode

Tap the green Beginner card to enter. You will see a list of lesson tiles. Tap any tile to start that lesson. Lessons can be done in any order, but most learners follow them in the order shown.

8.1 Alphabet

The Awing alphabet has 22 consonants and 9 vowels (including five special vowels not found in English). Each letter card shows the letter symbol, an example Awing word, the English meaning, and a speaker button. Tap the speaker to hear the letter pronounced.

Swipe left and right to move between letters. Tap **Done** when you've viewed them all.

8.2 Vocabulary (Words)

Flashcards organized by category: body parts, animals, nature, food, family, actions, things, daily life, time, and more. Each card has:

- A picture
- The Awing word
- The English meaning
- A "Hear it" button for audio

Tap the category chips at the top to switch between categories. Swipe left to move to the next word. Words you view are tracked so the system can show you which you have not yet seen.

8.3 Phrases & Greetings

Common everyday phrases verified by Dr. Sama from the Awing Orthography reference. Examples include greetings, introductions, and short questions. Each phrase has full audio.

8.4 Tones

Awing is a tone language, meaning the pitch of a syllable can change a word's meaning. This lesson teaches the five tones:

- **High** (marked with an acute accent, e.g. á)
- **Mid** (no mark, e.g. a)
- **Low** (marked with a grave accent, e.g. à)
- **Rising** (marked with a caron, e.g. ■)
- **Falling** (marked with a circumflex, e.g. â)

The lesson includes minimal pairs (words that only differ by tone) so you can hear the difference clearly.

8.5 Numbers (1 to 10)

Counting in Awing from one to ten. Each number card has the Awing word, the digit, an illustration, and audio.

8.6 Pronunciation Practice

Tap a word, listen to the reference pronunciation, then tap the big microphone to record yourself saying the word. You can play your recording back and compare side-by-side. This is for practice — your recording is not graded by a computer and is not submitted anywhere.

8.7 Quiz

Ten quizzes, twenty multiple-choice questions each. A typical question shows an Awing word and asks "What does this word mean?" — you tap the correct English meaning from four choices. Other question shapes include the reverse ("How do you say [English] in Awing?") and tone identification.

Each correct answer earns XP. If you score 80% or higher on a quiz, a confetti animation celebrates and the quiz is marked as passed. Scores save automatically; you can re-take any quiz to improve your best score. To unlock Medium Mode you need 90% or higher on all 20 Beginner quizzes (see section 9).

8.8 Review (Spaced Repetition)

Words you've struggled with come back here automatically using spaced repetition. The system shows them again after 1 day, then 3 days, then 7 days, then 14 days. For each word, tap **I knew it** or **Still learning** to tell the system how confident you felt — it adjusts the next review date based on your answer.

8.9 Games (Picture Match)

The Beginner game is **Picture Match** — different from the Quiz. There are no question prompts; instead, each round shows four pictures and four Awing word chips. Drag each chip onto the picture it describes. When all four are correctly placed, the next round loads automatically.

- **25 rounds** per session, **4 word/picture pairs** per round — about 100 matches in a full session
- Words are shuffled fresh each game; no memorizing positions
- Wrong placements bounce back so you can try again
- A confetti animation plays when you finish all 25 rounds
- The "Words seen" counter at the top of the game tracks which of the Beginner vocabulary words you have practiced

Picture Match is for practice and exploration — it does not count toward unlocking Medium Mode. Only the Beginner **Quiz** scores count for unlocking.

9. Medium Mode

Medium Mode is for learners who have mastered the Beginner fundamentals. It introduces grammar, more complex sounds, and writing exercises.

How to unlock Medium Mode:

- Complete **all 6 Beginner lessons** (Alphabet, Vocabulary, Phrases, Tones, Numbers, Pronunciation)
- Score **at least 90%** on **all 20 Beginner quizzes**

Until both conditions are met, the Medium card on the home screen shows a lock icon and a grey background. The lock lifts automatically the moment you meet the requirements — no need to do anything special.

9.1 Short Sentences

Common everyday sentences with word-by-word breakdowns. Tap a sentence to see each word translated, then hear the whole sentence at natural speed.

9.2 Consonant Clusters

Awing has three special kinds of consonant clusters that don't exist in English:

- **Prenasalized** - mb, nd, ng, nj (a nasal sound glued to the next consonant)
- **Palatalized** - ty, ky, py (a consonant followed by a y-sound)
- **Labialized** - tw, kw, bw (a consonant followed by a w-sound)

The lesson shows each cluster with example words and audio.

9.3 Vowels & Syllables

Three tabs:

- **Vowels** - the 9-vowel chart in 3x3 grid with audio
- **Long vowels & sequences** - contrasting pairs like *fe* vs *fee*
- **Syllables** - the 6 Awing syllable types and verb suffixes

9.4 Noun Classes

Awing has at least 9 noun classes (groups of nouns that share the same singular/plural pattern). This lesson shows the pattern for each class plus a "Guess the Plural" exercise where you predict the plural form of a noun based on its class.

9.5 Sentence Building

Eight Awing sentences shown with word-by-word breakdowns, followed by a building exercise where you drag words into the correct order to reconstruct sentences.

9.6 Difficult Words

Awing words that are commonly mispronounced or spelled wrong. Each entry shows the word, the common mistake, and audio.

9.7 Numbers 11-100

Teens, tens, and big numbers — the patterns that build everything above ten. Each number card has the Awing word, the digit, and audio. Practice with the included drill.

9.8 Writing Quiz

Ten fill-in-the-blank sentences per attempt. The sentence is shown with one word missing; you pick the right word from four choices. Each question has the audio of the full sentence to help you. Score 90% or higher to unlock Expert Mode.

9.9 Games (Sentence Build)

The Medium game is **Sentence Build**. The English version of a sentence is shown at the top; below it, the Awing words appear in random order as draggable chips. Drag them into the correct order to build the Awing sentence, then tap **Check**. Correct sentences unlock the next round.

Like the Beginner game, Sentence Build is for practice — scores here do not count toward unlocking Expert Mode. Only the Medium Writing Quiz score matters for unlocking.

10. Expert Mode

Expert Mode is the deepest layer of the app. It focuses on tones, sound changes, and full conversations. There is no vocabulary list in Expert Mode — by this point you are working with full Awing constructions, not isolated words.

How to unlock Expert Mode:

- Complete **all 5 Medium lessons** (Clusters, Vowels, Noun Classes, Sentences, and Numbers)
- Score **at least 90%** on the **Medium Writing Quiz**

The Expert card unlocks automatically the moment both conditions are met.

10.1 Tone Mastery

An advanced tone identification quiz. The app plays an Awing word, and you tap the tone you heard. Includes all five tones and combinations.

10.2 Sound Changes (Allophones)

Awing has 14 underlying consonants but 54 surface sounds. This lesson teaches the 6 main allophonic rules — how a single consonant changes depending on its position in a word.

10.3 Elision Rules

How vowels drop or merge when words come together in fast speech. Includes a practice exercise where you decide whether a given phrase should be written with or without elision.

10.4 Conversations

Six dialogues with two or three speakers. Each line has audio. You can step through line by line, replay any line, and try role-play mode where you record yourself saying one role's lines.

10.5 Advanced Words

Abstract concepts, proper nouns, and rare vocabulary you won't see at lower levels — Awing words for ideas like justice, ancestry, and tradition, plus names of places and people. Each card has audio and an English explanation.

10.6 Advanced Numbers

Hundreds, thousands, and the number patterns that build everything above 100. Includes ordinals and counting structures used in storytelling and commerce.

10.7 Expert Quiz

Ten quizzes, each with two paragraphs of fill-in-the-blank. Each paragraph has three blanks. Topics include daily life, the market, family, and traditional stories. These are the hardest exercises in the app — finishing them with 90% or higher means you have mastered all the structures the app teaches.

10.8 Games (Tone Hunt)

The Expert game is **Tone Hunt**. The app plays an Awing word, and you tap which tone you heard (High, Mid, Low, Rising, or Falling). Excellent ear training for the most subtle distinctions Awing makes. Each session shuffles the word list so you never get the same order twice.

11. Stories Mode

Stories Mode is available from the start — it is not gated by any other level. Tap the teal Stories card on the Home Screen.

Four short Awing stories are bundled with the app. Each story has:

- An illustration
- The story title in Awing and English
- The story text shown sentence by sentence with audio
- A vocabulary tab so you can review the new words from the story
- A comprehension quiz at the end

To read a story:

- 1 Tap the story tile
- 2 Tap **Start**
- 3 Tap **Play** on each sentence to hear it
- 4 Tap **Next** to move to the next sentence
- 5 When you reach the end, take the comprehension quiz to test what you understood

12. Daily Words

Every day, the app picks 10 new Awing words for each profile. The picks are personalized based on:

- The profile's current level (Beginner, Medium, or Expert)
- The time of day (different categories suit morning vs. evening)
- The Cameroon season (rainy April-October, dry November-March)
- The day of the week (one category gets a boost each day)
- Words the profile has already learned (excluded so each day shows new words)

12.1 Where to find Daily Words

- 1 From any mode home screen, look for "Today's Words"
- 2 Tap to open the Daily Words screen
- 3 You'll see today's 10 picks with pictures and audio

12.2 The Learned Counter

At the top of the Daily Words screen, a trophy icon shows how many words this profile has learned overall through Daily Words. The counter only goes up when you actually open the screen — picks chosen automatically in the background do not count.

12.3 Each profile gets its own picks

If two children share an account, each child sees a different set of 10 words. Their learned counters are also independent.

12.4 Daily Notifications

To get a reminder every day:

- 1 Open Today's Words
- 2 Scroll to the Settings card at the bottom
- 3 Toggle **Daily notification** on
- 4 Tap **Time** to pick when the reminder should appear
- 5 Tap **Send preview now** to see what the notification looks like

13. Games (one per Mode)

Each Mode has exactly **one** game tile on its home screen. Games are different from Quizzes — they are drag, tap, and listen mini-games for practice and exploration. Game scores do **not** count toward unlocking higher modes — only Quizzes do.

Mode	Game	How it works
Beginner	Picture Match	Drag Awing word chips onto the matching pictures. 4 pairs per round, 25 rounds per s
Medium	Sentence Build	Drag Awing word chips into the correct order to build the Awing translation of an Engl
Expert	Tone Hunt	Listen to an Awing word and tap which of the 5 tones you heard (High / Mid / Low / R

Coverage tracker: each game shows "Words seen: X / Total" so you can see how much of the level's vocabulary you have practiced through games. The pool refreshes each session so you eventually cover everything.

14. Profile Progress, XP, and Badges

Tap the profile icon at the top right of the Home Screen to see this profile's complete progress.

The Profile screen shows:

- **Level and XP** - 200 XP per level. You earn XP from completing lessons, scoring well on quizzes, and unlocking badges.

- **Daily streak** - how many days in a row you've opened the app.
- **Badges** - 9 achievement badges that unlock based on milestones (your first quiz, 100 words seen, first 100% quiz score, and more).
- **Quiz best scores** - your highest score on each quiz, shown with star ratings (gold for 90+%, silver for 70-89%, bronze for 50-69%).
- **Lessons completed** - which lessons you have finished, by mode.
- **Review reminder** - how many words are due for spaced repetition review.

15. Contributing Your Voice

If you are an Awing speaker, you can help improve the app for every learner by recording words, fixing spellings, or suggesting new words.

15.1 How to open Contribute

- 1 From the Home Screen, tap the **Contribute** card
- 2 A parental gate asks a simple question (designed so kids can't open this section accidentally). Answer it.
- 3 The contribution form opens

15.2 Choose the type of contribution

- **Spelling Correction** - the app shows a word spelled incorrectly. Submit the correct spelling.
- **Pronunciation Recording** - record an audio clip for a word so kids hear a real Awing speaker.
- **New Word** - submit an Awing word the app doesn't yet include.
- **New Sentence** - submit an Awing sentence (greeting, common phrase, useful expression).
- **General Feedback** - any other comment, suggestion, or bug report.

15.3 Recording a pronunciation

- 1 Pick **Pronunciation Recording** as the type
- 2 Search for the word you want to record (Awing or English)
- 3 Once you select the word, you'll see its current pronunciation playback button — tap it to hear what the app says today
- 4 Tap the big microphone button to start recording
- 5 Say the word clearly. The app records for up to 10 seconds, then automatically stops
- 6 Listen back with **Play mine**. If you want to redo it, tap **Delete** and record again
- 7 When you are happy with the recording, tap **Submit**

Important: if a word already has an approved native recording, the app will tell you so and ask you to pick a different word. This is to avoid duplicate effort — focus your energy on words that still need a voice.

15.4 What happens to your submission

- 1 The recording is saved locally on your device
- 2 It gets emailed/uploaded to the developer for review
- 3 Dr. Sama listens to it and decides whether to approve
- 4 If approved, the recording ships with the next app update
- 5 When kids tap that word, they will hear your voice instead of the computer voice

Your name is stored as the contributor on the developer side but is NEVER shown to children using the app. Kids hear the recording, not the recorder's name.

16. Switching Profiles

- 1 From the Home Screen, tap the switch-profile icon at the top right
- 2 The profile picker appears
- 3 Tap the profile you want to use
- 4 If that profile has a PIN, enter it
- 5 The Home Screen now shows that profile's progress, daily words, and learned counter

There is no need to sign out and sign back in. Each profile is completely separate from the others within the same Google account.

17. Settings

17.1 Cloud Backup

Backup is automatic. After every lesson, quiz, or recording you submit, the app saves your progress to your Google account's cloud. The cloud icon on the Home Screen shows the status:

- Green check - synced
- Spinning - syncing now
- Grey/offline - waiting for internet

To verify your progress is backed up, tap the cloud icon. The details screen shows the last successful backup time.

17.2 Audio Voices

The app has six character voices, automatically chosen based on your current mode:

- **Beginner** - boy and girl voices (child voices)
- **Medium** - young man and young woman
- **Expert** - adult man and adult woman

For words that have a native speaker recording (Dr. Sama, his family, or community contributors), the native voice plays in every mode regardless of the current character voice.

17.3 Notifications

Currently the only notification is the Daily Words reminder. See section 12.4 for how to enable it.

17.4 About

Scroll to the bottom of the Home Screen to see the version number. Tap it to see the About screen with full version, build number, developer information, and credits.

18. Tips for Parents

- Create **one profile per child**. Even siblings should not share — each kid's progress, daily words, and counter are separate.
- Have everyone **start at Beginner**, even older kids and adults. The foundations (alphabet, tones, basic vocabulary) are essential for everything that follows.
- Set a **daily notification time** (morning or after school) and the kids will come back to the app on their own.
- **Listen along** with the audio when you can. Awing tones are subtle and an adult's ear catches things a kid's might miss.
- Encourage **Pronunciation Practice**. Saying words out loud is one of the strongest tools for memory.
- **Review the Profile screen weekly**. The XP and badges make great talking points ("You earned the Tone Master badge — show me one tone you learned this week!")
- **Use Contribute together**. If you are an Awing speaker, record words alongside your child — they will hear your voice in the app for the rest of their learning journey.

19. Troubleshooting

Sign-in with Google doesn't work

- Check that you are connected to the internet
- Make sure your phone has at least one Google account added (open the Settings app to verify)
- Try signing out of Google in your phone Settings, then back in
- If the issue persists, send a message via the Feedback icon with a screenshot of the error

Audio does not play

- Check your phone is not muted, on Do Not Disturb, or routed to a Bluetooth device that is off
- Try "Hear it" on a different word; if other words work, that specific word might not yet have audio in the current voice — try another mode
- Restart the app

The app is slow on first launch

Normal. The first launch unpacks about 1.1 GB of content. Subsequent launches are fast. If first launch takes more than 5 minutes, restart the app and try again.

I scored above 90% but Medium is still locked

- Make sure you have scored above 90% on **ALL 20** Beginner quizzes, not just some. The Profile screen shows which quizzes are above 90% (gold star) vs below.
- Also confirm all 6 Beginner lessons are checked off. Open each lesson and tap **Done** at the end if you have not already.

Lost my progress after switching phones

- Sign in to the new phone with the **same Google account** you used on the old phone
- Wait 30 seconds for the cloud restore to complete
- If progress does not appear, tap the cloud icon and tap **Restore from backup**

Contribute screen says the word is already recorded

That word already has an approved native recording, so a new recording is not needed. Use the search to find a word that does not have audio yet — those are the ones your voice would improve.

I see a wrong meaning or spelling in the app

Use Contribute - Spelling Correction. Type the word as it appears in the app, then type the correct version. The developer will review and update in the next release.

20. Privacy & Support

Privacy

- The app uses Google Sign-In; no separate password
- Your progress saves to your own Google account's cloud — only you can read it
- No ads, no in-app purchases, free forever
- Recordings you submit go to the developer for review before being added to the app

- Anonymous usage statistics (which lessons opened, which quizzes scored what) help the developer improve the app. You can disable analytics in your Profile screen.

Support

For questions, bug reports, or suggestions:

- **In-app Feedback icon** (top-right of Home Screen) - fastest way to reach the developer
- **Email:** samagids@gmail.com
- Developer: **Dr. Guidion Sama, DIT**

Thank you for learning Awing.

Every word you learn helps keep the language alive.
